

Certificate of Completion

THIS CERTIFIES THAT
CALEB FELLOWES

has participated in the following education session:

Enteral Feeding Tubes

Presenter The Nursing CPD Institute

In this session you will:

- Gain knowledge regarding the different types of enteral feeding tubes
- Learn about the risks associated with enteral feeding tubes
- Gain knowledge regarding practical ways that you can reduce the risks associated with enteral feeding tubes
- Learn common enteral feeding tube 'trouble shooting' tips

Completed on

04 May 2019 (duration of 1 hour/s)

This equates to 1 CPD Hour/s (Continuing Professional Development)

REFLECTION:

The Australian Guidelines for the Prevention and Control of Infections in Healthcare identify that 'enteral feeding is usually prescribed for patients in hospital requiring artificial nutrition support for 7-10 days and long-term feeding/home enteral tube feeding may be considered for patients needing artificial nutrition support for more than 30 days.

Contamination of feeds is a key concern in both the hospital and community setting, with contamination largely occurring during the preparation or administration of feeds and being linked to serious clinical infection.
