

Certificate of Completion

THIS CERTIFIES THAT
CALEB FELLOWES

has participated in the following education session:

Neonatal and Paediatric Patient Blood Management Guidelines 2016

Presenter The Nursing CPD Institute

In this session you will:

- Learn about Red Blood Cell Infusion Guidelines for neonates and paediatric patients
- Explore the effect of FFP, cryoprecipitate, fibrinogen concentrate, and/or platelet transfusion on patient outcomes
- Gain knowledge to support contemporary transfusion practices including foetal transfusions
- Attain knowledge about non-pharmacologic blood conservation strategies

Completed on

26 April 2019 (duration of 2 hour/s)

This equates to 2 CPD Hour/s (Continuing Professional Development)

REFLECTION:

Specific guidelines are required to support health-care professionals in making clinical decisions about blood management in neonatal and paediatric patients. Specific guidelines are needed for these age groups because there are considerable physiological differences between neonates and children at different developmental stages, and between children and adults. Transfusions can be lifesaving and improve health, but can also have adverse consequences. Both the benefits and adverse consequences of transfusions in neonatal and paediatric patients may be lifelong.

Cheryl Dezotti
