

Certificate of Completion

THIS CERTIFIES THAT
CALEB FELLOWES

has participated in the following education session:

Bairnsdale / Buruli Ulcer

Presenter The Nursing CPD Institute

In this session, you will:

- Gain knowledge regarding the aetiology of these Ulcers
- Discover the areas of Australia where these Ulcers are more likely to present
- Explore the current modes of treatment options
- Learn about the complications associated with these Ulcers

Completed on

27 April 2019 (duration of 1 hour/s)

This equates to 1 CPD Hour/s (Continuing Professional Development)

REFLECTION:

Buruli/Bairnsdale Ulcers are a slowly progressive destructive infection of the skin and of adipose and soft tissue caused by *Mycobacterium ulcerans*, an environmental pathogen that produces a potent toxin. The Bairnsdale ulcer has been in Australia for many years, but its prevalence in the country is growing, with parts of Victoria and Queensland becoming hot spots. The Centre for Disease Control in America and an article from the Australian Medical Association form the basis for this session.

Cheryl Dezotti

Director of the Nursing CPD Institute

Certificate #266220 issued by the
