Completed on

**01 April 2019 (duration of 1 hour/s)**

**This equates to 1 CPD Hour/s (Continuing Professional Development)**

### REFLECTION:

Diabetic foot ulcers are complex, chronic wounds, which have a major long-term impact on the morbidity, mortality and quality of patients' lives. The development and progression of a Diabetic foot ulcer is often complicated by wide-ranging diabetic changes, such as neuropathy and vascular disease. This session utilises the document International Best Practice Guidelines: Wound Management in Diabetic Foot Ulcers, published by Wounds International as the session reference source.
